EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

2. Authorization for this examiner's amendment was given in a telephone interview with Ilya. Zborovsky, Reg. No. 28563 on 4/10/06.

3. In Amendment to the claims filed 3/28/06:

I. In claim 1:

1. (currently amended) A method for diagnosis of a sensor in a motor vehicle having an internal combustion engine, comprising the following steps:

during operation of the motor vehicle, monitoring an output signal of the sensor for whether a maximum value of the output signal undershoots a first threshold value and/or a minimum value of the output signal overshoots a second threshold value;

forwarding a signal to a controller that signals to the controller that the sensor, upon restarting of the motor vehicle, might be furnishing incorrect data if the maximum value of the output signal undershoots the first threshold value and/or the minimum value of the output signal overshoots the second threshold value; and

wherein the undershooting or exceeding of the threshold value is used for diagnosis of the sensor.

Allowable Subject Matter

4. Claims 1-12 are allowed over the prior art of record.

The prior art of record fails to teach in combination as claimed a method for diagnosis of a sensor in a motor vehicle having an internal combustion engine, including during operation of the motor vehicle, monitoring an output signal of the sensor for a maximum/undershoot value compared to first and second threshold values. Forwarding a signal to a controller that signals to the controller that the sensor, upon restarting of the motor vehicle, might be furnishing incorrect data if the maximum value of the output signal undershoots the first threshold value and/or the minimum value of the output signal overshoots the second threshold value. The undershooting or exceeding of the threshold value is used for diagnosis of the sensor.
